Using Medications Wisely

This session will review current pharmacologic approaches to the care of persons with dementia, with a special focus on the use and misuse of antipsychotic medications. It will include a review of successful non-pharmacologic approaches to distress-signal behaviors and a discussion of why reducing antipsychotic prescribing to people with dementia remains so important. Deprescribing protocols will be made available.

Registration also provides access to recordings of all Dementia Reconsidered sessions as well as a downloadable curriculum that can provide up to 8 hours of dementia training.

Recommended Audience: Health Professionals involved in care of persons with Dementia, including Physicians, PAs, NPs, Pharmacists. May also be of interest to people living with dementia and those who love and care for them.
