Rational & Background
Volunteering is a long-standing activity shown to improve health, well-being, and social connection among older adults (Hsu et al., 2023). Gil-Lacruz et al. (2019; JBS International, 2019). Research has demonstrated the positive effects that volunteering has on older adults across different stages of later adulthood and disability status. The COVID-19 pandemic critically impacted the health and wellness of older adults and communities. As research progressed, it became clear that COVID-19 was a critical health risk for older adults in particular (Mueller et al., 2020), leading to the development of socially isolating infection control measures, like quarantining and social distancing. As many aspects of society moved online, virtual volunteering provided an avenue for continued connection and community engagement among older adults. Organizations were presented with the opportunity to transition volunteer roles to virtual spaces, create more long-term roles for virtual volunteering, and sustain a wider use of virtual volunteering into the future (Lachance 2021). Newly learned digital skills scaled up by the pandemic could have continuous benefit for older adults who wish to engage in internet-based leisure activities such as virtual volunteering (Li et al., 2021).

Methodology

Recruitment: Key Informants
Two groups of key informants were recruited for this study:
• 1. Experts on topics related to virtual volunteering and technology, including: thought leaders, technology leaders, program managers, and volunteer coordinators.
• 2. RSVP program directors throughout the U.S. The RSVP program is a national older adult volunteer program administered by AmerCorps that recruits and places older adults into volunteer service in local community organizations.

Data Gathering: Semi-Structured Interviews
• Semi-structured interviews with 36 key informants were carried out via recorded and transcribed Zoom sessions.
• Interview questions covered the following topics: volunteer management, benefits and challenges of using virtual volunteering, technology considerations, and identification of practices/strategies that are most and least successful when applied to virtual volunteering.
• The 36 interviewees represented 30 organizations:
  - 16 RSVP volunteer programs
  - 14 unique organizations (e.g., RSVP volunteer programs).
  - These were the key informants with expertise in technology and volunteerism.

Data Analysis and Coding
• The coding process was organized in Dedoose qualitative software.
• Data collection included transcribed interview data, minutes of virtual sessions, and documents.
• The coding was reviewed for any discrepancies by the research team.

Findings

COVID served as a facilitator of virtual volunteering with numerous benefits expressed by interviewees, including:
• Increased accessibility of volunteering
  - Enabling access for a wider range of participants/service recipients
  - Reducing geographic barriers to volunteering
• Increased convenience and flexibility for the volunteer
• Increased technology confidence among volunteers
• Increased opportunities for new, improved, and different ways for social connection
• Reduced COVID transmission risk

Virtual Volunteer Activities
The most frequently reported virtual volunteer assignments consisted of:
• Community health education activities
  - e.g. education around insurance, health, nutrition, and disease
• Financial services
  - e.g. tax preparation, financial education, and scam prevention
• Companionship
  - e.g. friendly visiting and visits to reduce isolation
• Other roles: Disaster and emergency planning, administrative roles such as board membership

Areas with increasing virtual volunteering opportunities also included tutoring and mentoring, and computer/technology education.

Interviewees discussed ways that they were able to transition in-person opportunities over to virtual:
• "...pre-pandemic they would have done face to face (peer counseling) only... And during COVID, we were able to play to getting clients that had the capacity and the technological literacy to engage in those sessions via zoom. Now, post pandemic, there are still people that choose to serve only in that Zoom environment and clients that still choose to receive their service in that fashion." -RSVP #2

Ideal Virtual Volunteer Traits
Some personality traits sought after in virtual volunteers included:
• Being friendly
• Open-minded
• Empathetic
• Proactive
• Willing to take chances/work outside of their "comfort zone"

• "...proactive, independent, willing to learn, willing to fail knowing that there are challenges, losing that fear of nothing wrong was going to happen, and an interest to be connected." -K.I. #8

Partnerships, Resources, Training, and Support
Partnerships with local and national organizations were forged, anticipated, or desired with organizations as a key component for successful virtual volunteering offerings. This included partnerships that provided funding, access to technology, tech support, volunteer recruitment and training support, and facilitated or expanded volunteer programs.

• "...there’s a lot of other small nonprofits in our state that do tech training, digital literacy training, connect people to, you know, refurbished computers, and try to help them to connect to that affordable connectivity program as well." -K.I. #6

Interviewees reported using similar recruitment methods, volunteer recognition strategies, and volunteer training methods for in-person and virtual volunteering.

Discussion

Training and support considerations for successful virtual volunteer assignments included individual or group technology training and providing mechanisms (internal or external) for tech support. The need for digital literacy training was a common theme.

"...we also provided training for people in how to work remotely and we also had to create new protocols for how to work with clients remotely. So, we created a document for that." -RSVP #1

Funding was cited as a barrier to virtual volunteering which limited hardware, software, internet, technology training, program development, and general program support needed for virtual volunteer assignments.

Flexible funding and new funding sources during COVID were noted as helping to fill these gaps temporarily and catalyze the development of virtual opportunities.

Aims & Objectives

To further explore the implications of virtual volunteering in a post-pandemic world, this research examined the types of volunteer roles that were successfully launched during COVID and those that remain post-COVID. This included:
• What kinds of virtual volunteer activities have programs used to engage older adult volunteers?
• What are the types of training and support needed for older adult virtual volunteers?
• Which partnerships and resources are needed to support virtual volunteering roles and programming?
